Borderline Psychopathology and its Treatment. Gives as much weight to the patient's reports of his subjective experience as to his behavior in the transference. What the patient feels - his "inner emptiness," his "aloneness" were the spur and the foundation for the theoretical formulations. Borderline Personality Disorder (BPD) is a psychological disorder affecting about 1 to 2% of the population. It occurs more frequently in women than in men. BPD is associated with severe emotional suffering and impulsive behavior. Research shows that the symptoms of BPD can be improved significantly over time.

### **CBT Therapy for Borderline Personality Disorder, ABCT**

Borderline personality disorder treatment involves relearning how to experience emotions in a healthy way and learning better ways to deal with painful emotions. Treatment is usually very successful if a person can first identify (and take personal responsibility for) how they may be making themselves unhappy with certain destructive coping ...

### **Borderline Personality Disorder Treatment - There Is Hope**

Borderline Personality Disorder (BPD) is a severe form of psychopathology. It is characterised by disturbances in mood, interpersonal relationships, sense of self and difficulties in controlling impulsive behaviours such as self-injury and substance use. Therapists have had difficulties engaging in treatment because the interpersonal disturbances associated with the disorder can affect the therapy relationship and the complexities of the client's presentation can lead to a sense of impotence.
