### Dairy Cattle Nutrition and Feeding | Penn State Extension

Dairy cattle (also called dairy cows) are cattle bred for the ability to produce large quantities of milk, from which dairy products are made. Dairy cattle generally are of the species *Bos taurus*. Historically, there was little distinction between dairy cattle and beef cattle, with the same stock often being used for both meat and milk production. Today, the bovine industry is more specialized ...

### Dairy cattle - Wikipedia

The requirement for feeding dairy cattle is 110.25 international units (IU) of vitamin A/kg of body weight. Feeding twice the requirement is very common due to vitamin degradation and appears to be safe. 34 The conversion of  $\beta$ -carotene to 1 mg vitamin A in dairy cattle = 7.3 mg 34.

### Nutrition and feeding of dairy cattle

as important for a dairy cow to eat a balanced diet to live a long, healthy life. The basic difference between humans and cows is how our stomachs function. Humans are monogastrics, meaning we have a single stomach digestive system. Pigs, cats and dogs are also monogastrics. The prefix “mono-” means “one.” Cows are
