A method for calibrating models of agricultural production and resource use for policy analysis is proposed to leverage multidisciplinary agricultural research at the National Center for Alluvial Aquifer Research (NCAAR). An illustrative example for Sunflower County, MS, is presented to show how plot-level research can be extended to draw systemic region or basin wide implications.

A fitted linear regression model can be used to identify the relationship between a single predictor variable  $x_j$  and the response variable  $y$  when all the other predictor variables in the model are "held fixed". Specifically, the interpretation of  $\beta_j$  is the expected change in  $y$  for a one-unit change in  $x_j$  when the other covariates are held fixed—that is, the expected value of the partial ...
