NP-completeness was introduced by Stephen Cookin 1971 in a foundational paper. Leonid Levinindependently introduced the same concept and proved that a variant of SAT is NP-complete. 1.S. Cook. The Complexity of Theorem-Proving Procedures. STOC, 1971. 2.L. Levin. Universal Search Problems. PINFTRANS: Problems of Information Transmission, 1973.

as multilayer perceptrons is NP-complete. In this paper we show that learning in min-max modular (M3) neural networks is tractable. The key to coping with NP-complete problems in M3 networks is to decompose a large-scale problem into a number of manageable, independent subproblems and to make the learning of

NP Reduction NP-Completeness Theorem: MCDR is NP-Complete. Proof: We prove by VERTEX-COVER \leq MCDR. Decision Vector Cover : Given a graph $G = (V, E)$ and an integer k, does it have a vertex cover VC with size k. Then we will construct an instance of MCDR from G and k. its NP-completeness. For LBDC, we design an f-approximation, where f is the largest number of potential controllers for a switch in the network. We also propose both centralized and distributed approaches to solve LBDC time effectively. The numerical results validate our designs, which become a solution to manage and coordinate large-scale data ...

Zero Knowledge Proof for all NP Our goal here is to show a ZK proof system for any language in NP. To do so, it suffices to show a ZK proof system for any NP-complete language L. Given such a and any L 02NP, we then obtain a ZK proof for L by reducing the common input x to a string x' such that x 02L0.x 2L;
