This new approach to real analysis stresses the use of the subject in applications, showing how the principles and theory of real analysis can be applied in various settings. Applications cover approximation by polynomials, discrete dynamical systems, differential equations, Fourier series and physics, Fourier series and approximation, wavelets, and convexity and optimization.

$\$begin{group}$ Ash's Probability & Measure Theory has complete solutions to many of the exercises. I discovered this about (the first edition of) Ash's book many years ago simply by browsing in a university library. If you have access to such a library, I suggest you simply go to the locations where real analysis texts are shelved (in the U.S., this will be in the QA 300 and QA 330 vicinities ...

Math 431 - Real Analysis I Solutions to Test 1 Question 1. Below, you are given an open set S and a point $x \in S$. Thus, by de nition of openness, there exists an " $\epsilon > 0$ such that $B(x; \epsilon) \subseteq S$." Your job is to do the following: (i) Provide such an " $\epsilon > 0$ that $B(x; \epsilon) \subseteq S$ ". (ii) Show that your " ϵ " is actually positive.
